**TECHNICAL SALES CORPORATION'S EXPERTISE AND
EBARA INTERNATIONAL CORPORATION'S
MODEL DGU/DGFU "GRINDER" PUMPS – PERFECT PACKAGED SOLUTIONS**

ROCK HILL, SC – AUGUST 11, 2004 – Technical Sales Corporation, headquartered in Tampa, FL, uses Ebara International Corporation's Model DGUII "grinder" pumps as part of their pre-fabricated package pump systems. Technical Sales' pre-fab. pump solutions are used for the pumping of sewage, effluent, storm and drainage waters.

Standard production systems range from household size to flows of over one million gallons per day. Stocking inventory includes pumps from 1/3 HP to 25 HP, control panels, and wet-wells from 18" to 48" diameters allows for a very strong competitive edge in the pre-fabricated package station business.

Ebara's Model DGUII/DGFU submersible "grinder" pump model is available in discharge sizes of 1¼ and 2 inch, from 2 to 5HP with capacities up to 80 GPM, and heads to 148 feet. FM explosion proof motors are available.

- more -

The DGUII/DGFU are used for small scale pressurized sewage transfer systems, drainage transfer, and commercial/household sewage and transfer. The heavy duty high chrome iron grinder system has powerful blades that reduce solid sizes for smooth, non-clogging flow. A reversible grinder ring provides longer service life and less maintenance. The pump is small and lightweight affording ease in installations and transport, including temporary installations.

The partnership between Technical Sales' Corporation's expertise and Ebara International Corporation's highly engineered Model DGUII grinder pumps create a market leading pre-fab packaged pump system.

Editor's Notes:

Technical Sales Corporation (TSC) was established in 1979, with a focus on two very closely related business endeavors: the distribution of pumps, controls, pipeline sealing and testing equipment and the manufacturing of pre-fabricated package pumping systems, which are completely tested and ready for field installation.

This approach has enabled Technical Sales Corporation to be the originator and leading manufacturer of pre-fabricated pumping stations from standard production items to custom site-specific designs.

Technical Sales, located in Tampa, Florida, facility has over 12,000 square feet allowing TSC to stock, manufacture and store materials for jobs that are in progress as well as semi-finished goods.
